# Kidzee Activity Platform + Social Media Auto-Publishing: Comprehensive Research Report

**Date**: March 29, 2026 **Purpose**: Evaluate tools, APIs, strategies, and costs for building a centralized activity platform with social media auto-publishing for preschools.

---

## 1. Commercially Available Tools

### 1A. Preschool Management Platforms (US-Focused)

**Brightwheel**

- **What it does**: All-in-one childcare management — digital check-in/out, daily reports with photos, real-time parent newsfeed, billing, enrollment, assessments, messaging
- **Pricing**: Custom/quote-based. Free version available for basic features. Premium pricing based on enrollment capacity. Contact sales required. Discounts for annual commitments and multi-site operators
- **Social media features**: NONE. Brightwheel is purely parent-facing. Photos shared in the app stay in the app. No social media publishing, scheduling, or integration
- **Limitations**: US-focused, no India pricing. No public-facing content features. No social media bridge

**Lillio (formerly HiMama)**

- **What it does**: Daily reports, attendance tracking, parent communication, curriculum planning, child assessments, photo/video sharing with parents
- **Pricing**: Quote-based, tiered plans. Free trial available
- **Social media features**: NONE. All content stays within the parent communication ecosystem
- **Limitations**: Educator-focused reporting tool, not a marketing/social media tool

**Bloomz**

- **What it does**: Parent-teacher communication, photo/video sharing, calendars, volunteer signups, behavior management (PBIS), student portfolios, newsletters
- **Pricing**: Free version available. Premium is per-student annual fee + onboarding. Essentials and All-Inclusive tiers. A la carte options available
- **Social media features**: NONE natively. Has a "Studio Newsletter" feature (new for 2025-2026) but no social media auto-publishing
- **Limitations**: Primarily a communication tool, not a content publishing platform

**Kangarootime**

- **What it does**: Digital check-in/out, automated billing, real-time parent communication, child development tracking, staff scheduling
- **Pricing**: Starts at $8/class. 90-day free trial. Enterprise packages available
- **Social media features**: NONE
- **Limitations**: Operations-focused. No content creation or social media features

**Tadpoles**

- **What it does**: Daily reports, photos/videos to parents via email/text, attendance, billing, classroom management dashboard
- **Pricing**: Quote-based
- **Social media features**: NONE. Media is sent to parents only (email/text delivery, not even in-app)

- **Limitations**: Very traditional — email/text based rather than app-first. No social presence features

**ClassDojo**

- **What it does**: Classroom community platform — behavior tracking, student portfolios, parent messaging, class stories (photo/video sharing), school-wide communication
- **Pricing**: Free for teachers and families. ClassDojo Plus for parents is ~$8/month (extra features like full activity reports). School/district pricing available
- **Social media features**: "Class Story" and "School Story" features allow sharing moments, but these are INTERNAL to ClassDojo — not published to social media. No external publishing
- **Limitations**: K-12 focused, less suited for preschool operations. No billing, enrollment, or attendance features

**Seesaw**

- **What it does**: Learning management for elementary — student portfolios, activity assignments, parent access to student work, progress tracking
- **Pricing**: Free basic version. Seesaw for Schools is quote-based
- **Social media features**: NONE. Student work stays within the Seesaw ecosystem
- **Limitations**: Learning-focused, not operations. Designed for K-3, not preschool management

**FreshSchools**

- **What it does**: School communication platform — newsletters, event management, volunteer coordination, parent directory
- **Pricing**: Quote-based for schools
- **Social media features**: Limited. Some social sharing capabilities for school news, but not automated activity-to-social publishing
- **Limitations**: Communication tool, not an activity documentation platform

### 1B. India-Specific Preschool Management Tools

**illumine**

- **What it does**: AI-powered childcare management — daily reports, attendance (QR code), billing/payments, enrollment management, child assessments, lesson plans, live classroom streaming, photo/video sharing with parents
- **Pricing**: Starts at INR 800/year per student. Annual, semi-annual, quarterly, or monthly plans. Center-based flat-rate option also available
- **Social media features**: NONE natively. Marketing campaign tools for enrollment, but no social media auto-publishing of activities
- **Limitations**: Strong India presence (3,000+ centers). Best option for operations but still lacks the social media bridge
- **Notable**: Supports 15+ languages, GDPR/SOC 2 certified, live streaming

**Sweedu**

- **What it does**: Preschool ERP — admissions, fee management, attendance, parent communication, transport tracking
- **Pricing**: Quote-based
- **Social media features**: NONE
- **Limitations**: ERP-focused, not content/activity platform

**EduSys**

- **What it does**: Pre-school management software — admissions, fees, attendance, timetable, parent app
- **Pricing**: Quote-based

- **Social media features**: NONE
- **Limitations**: Traditional school ERP. No media capabilities

**OpenEduCat**

- **What it does**: Open-source preschool management (Odoo-based) — admissions, attendance, fees, parent portal
- **Pricing**: Open-source base. Enterprise features priced separately
- **Social media features**: NONE
- **Limitations**: Requires technical setup. No media or social features

### 1C. Key Finding

**No existing preschool management tool offers native social media auto-publishing.** Every single platform (Brightwheel, Lillio, Bloomz, ClassDojo, Seesaw, illumine, etc.) keeps activity photos/videos within its own walled garden for parent communication. NONE of them bridge to Facebook, Instagram, YouTube, or Google Business Profile.

This is a genuine market gap. A platform that combines activity documentation WITH social media publishing would be differentiated.

---

## 2. Social Media Publishing APIs & Tools

### 2A. Direct Platform APIs

**Meta Graph API (Facebook Pages + Instagram)**

**Facebook Pages Publishing**:

- **Endpoint**: `POST /{page-id}/photos` (photos), `POST /{page-id}/videos` (videos), `POST /{page-id}/feed` (text posts with links)
- **Requirements**: Facebook App with `pages_read_engagement` and `pages_manage_posts` permissions. App Review required. Page admin must authorize the app
- **Rate limits**: 200 calls/hour per page. No explicit daily post limit, but excessive posting triggers spam detection
- **Media requirements**: Images must be hosted on a public URL. Videos use resumable upload (chunked). JPG/PNG for images
- **Cost**: FREE (API itself). Costs are development time + hosting for media

**Instagram Content Publishing**:

- **Endpoint**: `POST /{ig-user-id}/media` (create container) then `POST /{ig-user-id}/media_publish` (publish)
- **Requirements**: Instagram Business or Creator account connected to a Facebook Page. Facebook App with `instagram_basic` and `instagram_content_publish` permissions. App Review required by Meta
- **Rate limits**: 50 API-published posts per 24 hours (was 25, increased). 100 posts/day including carousel posts. Carousels count as 1 post
- **Supported content**: Single images (JPEG only), single videos (MP4, H.264, AAC), carousels (up to 10 items), Reels
- **NOT supported**: Stories via API, shopping tags, branded content tags, filters
- **Cost**: FREE

**Meta App Review Process**:

- Submit app for review with screencast demonstrating usage
- Typically 5-7 business days
- Must demonstrate legitimate business use case
- Annual re-verification may be required

**YouTube Data API v3**

- **Endpoint**: `POST /youtube/v3/videos` with `snippet`, `status`, and media upload
- **Requirements**: Google Cloud project with YouTube Data API enabled. OAuth 2.0 consent screen. User must authorize channel access
- **Quota**: Default 10,000 units/day. Video upload costs 1,600 units = **max 6 uploads/day** on default quota
- **Quota increase**: Requires compliance audit application to Google. Can take weeks
- **Supported formats**: Most video formats (MP4 recommended). Max file size 256GB. Max duration 12 hours
- **Cost**: FREE (within quota). Google Cloud project is free tier eligible
- **Key limitation**: 6 videos/day is tight for a preschool posting multiple activity videos. Quota increase requires justification

**Google Business Profile API**

- **Endpoint**: `POST /accounts/{accountId}/locations/{locationId}/localPosts`
- **Requirements**: Google Business Profile verified. Google Cloud project. OAuth 2.0
- **Capabilities**: Create posts with photos (JPG/PNG, 10KB-5MB, 720x720px recommended), call-to-action buttons, event posts, offer posts
- **Limitations**: 1 photo OR 1 video per post. No video upload via API (photos only for posts). Posts expire after 6 months. Phone numbers cannot be in post text
- **Cost**: FREE
- **Note**: GBP posts improve local SEO significantly — valuable for preschool discovery

## 2B. Social Media Middleware Services

**Buffer**

- **Platforms**: Facebook, Instagram, LinkedIn, Pinterest, TikTok, X/Twitter, YouTube, Google Business Profile, Threads, Bluesky, Mastodon (11 total)
- **Free plan**: 3 channels, 10 scheduled posts per channel per month
- **Essentials**: $6/month per channel — unlimited scheduling, analytics, engagement tools
- **Team**: $12/month per channel — unlimited team members, approval workflows, draft collaboration
- **API access**: Available on paid plans. REST API for creating posts, managing schedules
- **Best for Kidzee**: At 4 channels (FB + IG + YouTube + GBP) = $24/month on Essentials or $48/month on Team
- **Verdict**: Cheapest middleware with approval workflows on Team plan

**Hootsuite**

- **Platforms**: 35+ social networks
- **Pricing**: Starts at $99/month (Professional). Team at $249/month. No free plan anymore
- **API access**: Enterprise only
- **Best for Kidzee**: Overkill and expensive for a single preschool
- **Verdict**: Skip. Too expensive for this use case

**Later**

- **Platforms**: Instagram, Facebook, TikTok, LinkedIn, Pinterest, X/Twitter, YouTube
- **Pricing**: Starts at $18.75/month (annual). No free plan
- **Strength**: Visual-first planning with drag-and-drop calendar. Good for Instagram-heavy strategies

- **Verdict**: Decent but more expensive than Buffer for fewer features

**Ayrshare (API-first middleware)**

- **What it is**: Social media API service — you call their API, they handle posting to all platforms
- **Free tier**: 20 posts/month across all platforms
- **Premium**: $99/month — 1,000 posts/month, unlimited API calls
- **Business**: $499/month — multi-account management
- **API**: REST API with simple JSON. `POST /api/post` with `{ "post": "text", "platforms": ["facebook", "instagram"], "mediaUrls": ["https://..."] }`
- **Best for Kidzee**: Free tier (20 posts/month) could work for a single preschool posting a few times per week. Premium is overkill
- **Verdict**: Best API-first option if you want to avoid managing individual platform APIs

## 2C. No-Code Automation Platforms

**Zapier**

- **Free tier**: 100 tasks/month, 2-step Zaps only (1 trigger + 1 action)
- **Professional**: $19.99/month — 750 tasks, multi-step Zaps
- **Team**: $69/month — 2,000 tasks
- **Social media integrations**: Facebook Pages, Instagram (via Buffer/Later), YouTube, Google Business Profile, X/Twitter, LinkedIn
- **Best for Kidzee**: Could connect a form submission or webhook to social posting. Free tier is very limited (100 tasks = ~3 posts/day if each post uses 1 task per platform)
- **Verdict**: Good for prototyping. Gets expensive at scale

**Make.com (formerly Integromat)**

- **Free tier**: 1,000 operations/month, 2 active scenarios, 15-min intervals
- **Core**: $9/month — 10,000 operations, unlimited scenarios, 1-min intervals
- **Pro**: $16/month — 10,000 operations + advanced features
- **Best for Kidzee**: Much better value than Zapier. Core plan at $9/month gives 10,000 operations — enough for 100+ posts/month across 4 platforms
- **Verdict**: Best value no-code option

**n8n (Self-Hosted, Open Source)**

- **Cost**: FREE to self-host. Cloud version starts at ~$20/month
- **Self-hosting**: Docker on any VPS ($5/month on DigitalOcean/Hetzner). Unlimited workflows, no execution limits
- **Social media nodes**: Facebook, Instagram (via Graph API), YouTube, X/Twitter, LinkedIn, and 500+ other integrations
- **Community templates**: 512+ social media workflow templates available
- **Best for Kidzee**: If you already have a VPS, this is the most cost-effective automation layer. Visual workflow builder, completely free
- **Verdict**: Best option for developers who want full control at zero software cost

## 2D. Open-Source Social Media Schedulers

**Postiz**

- **GitHub**: gitroomhq/postiz-app (very active, 20k+ stars)
- **Platforms**: X, Instagram, LinkedIn, Facebook, Reddit, Threads, Mastodon, YouTube, TikTok, Pinterest (30+)
- **Self-hosting cost**: ~$5/month on Railway (app + Postgres + Redis)
- **Features**: Scheduling, AI content generation, analytics, team collaboration, approval workflows

- **Verdict**: Most feature-complete open-source option. Could replace Buffer entirely

**Mixpost**

- **GitHub**: inovector/mixpost
- **What it is**: Self-hosted social media management. "No subscriptions, no limits"
- **Stack**: Laravel/PHP
- **Verdict**: Good if you prefer PHP stack. Less active than Postiz

---

## 3. How Successful Preschools Do Social Media

### 3A. What Works (Content Strategy)

**Platform priority for preschools**:

1. **Instagram** — #1 for visual storytelling. Reels and Stories get highest engagement. Behind-the-scenes content, activity documentation, milestone celebrations
2. **Facebook** — Largest parent audience (75% of parents use it daily). Best for community building, event promotion, parent testimonials
3. **YouTube** — Long-form activity videos, virtual tours, parent education content. Great for SEO
4. **Google Business Profile** — Critical for local discovery. Posts with photos improve local SEO ranking
5. **TikTok** — Growing with younger parents. Short activity clips, fun moments, educational tips

**Content types ranked by engagement**:

1. Short video clips of children in activities (Reels/Stories) — highest engagement
2. Photo carousels showing a day's activities with captions
3. Milestone celebrations (first art project, learning to read)
4. Behind-the-scenes of classroom setup and teacher prep
5. Parent testimonials with photos
6. Educational tips for parents
7. Event announcements and recaps

**Key stat**: 92% of parents are more inclined to enroll their child in a preschool with an active social media presence (NAEYC survey).

### 3B. Indian Preschool Context

- Kidzee (@kidzeeindia) has an active Instagram presence as a franchise brand
- Individual franchise locations struggle because content creation is manual and time-consuming
- Most Indian preschool social media is done by marketing agencies charging INR 15,000-50,000/month
- The gap: Teachers already photograph activities for parent updates (WhatsApp groups) but this content never makes it to social media
- Opportunity: Capture the content teachers already create and route it to social media with minimal extra effort

### 3C. What Doesn't Work

- Stock photos or generic educational content — parents want to see THEIR school
- Irregular posting — consistency matters more than frequency
- Over-polished content — authenticity wins over professional production
- Posting without a content calendar — leads to gaps and inconsistency
- Ignoring comments and messages — social media is two-way

---

## 4. Tech Stack Recommendations for Next.js

### 4A. Architecture Decision: Direct API vs Middleware

| Approach | Pros | Cons | Best For |
|---|---|---|---|
| **Direct API** (Meta Graph + YouTube + GBP) | Full control, no middleware cost, no vendor lock-in | Complex setup, must handle each API separately, Meta App Review process | Technical teams who want maximum control |
| **Ayrshare API** | Single API for all platforms, handles complexity | $99/month at scale, vendor dependency | Fastest time to market |
| **Buffer API** | Proven, reliable, approval workflows built-in | $24-48/month, limited API on free plan | Teams that also want manual posting UI |
| **n8n/Postiz self-hosted** | Free, full control, visual workflow builder | Self-hosting overhead, more moving parts | Teams with DevOps capability |
| **Make.com** | No-code, $9/month, easy to change workflows | Less developer control, operations-based pricing | Non-technical teams or MVPs |

**Recommendation for Kidzee (Next.js app)**:

**Phase 1 (MVP)**: Use **Ayrshare free tier** (20 posts/month) or **Make.com Core** ($9/month) as the publishing layer. Build the activity capture and approval workflow in Next.js. This gets you to market fastest.

**Phase 2 (Scale)**: Replace middleware with **direct Meta Graph API + YouTube API** integration. Self-host **Postiz** or **n8n** for scheduling. This eliminates recurring costs.

### 4B. Recommended Tech Stack

```
Next.js App (Activity Platform)
├── Activity Capture
│   ├── Teacher uploads photos/videos via mobile-friendly form
│   ├── Bulk upload support (multiple photos per activity)
│   ├── Activity metadata: title, description, class, activity type
│   └── Auto-generate captions with AI (OpenAI/Claude)
│
├── Media Processing (Server-Side)
│   ├── sharp (npm) — resize images per platform specs:
│   │   ├── Instagram: 1080x1080 (square), 1080x1350 (portrait), 1080x566 (landscape)
│   │   ├── Facebook: 1200x630 (link share), 1080x1080 (post)
│   │   ├── YouTube: 1280x720 thumbnail
│   │   └── GBP: 1200x900 (4:3)
│   ├── ffmpeg (via fluent-ffmpeg) — video compression, format conversion
│   │   ├── H.264 codec, AAC audio
│   │   ├── Max 60 seconds for Reels, 90 seconds for Stories
│   │   └── Compress to under 100MB for Instagram, 256GB for YouTube
```

```
│   └── Store processed media in Cloudinary or Vercel Blob
│
├── Approval Workflow
│   ├── Teacher creates activity → auto-generates social posts (1 per platform)
│   ├── Admin/Principal reviews and approves/edits
│   ├── Approved posts enter publishing queue
│   └── Rejection sends back to teacher with notes
│
├── Publishing Engine
│   ├── Scheduled publishing (cron via Vercel Cron or external)
│   ├── Platform-specific formatting (hashtags, mentions, emojis)
│   ├── Rate limit awareness (respect API quotas)
│   └── Retry logic with exponential backoff
│
├── Analytics Dashboard
│   ├── Posts published per platform
│   ├── Engagement metrics (via platform APIs)
│   └── Content calendar view
│
└── Storage
    ├── Supabase (metadata, users, activities, post status)
    ├── Cloudinary or Vercel Blob (media files)
    └── Redis/Upstash (publishing queue, rate limiting)
```

### 4C. Image/Video Optimization Pipeline

```
// Example: sharp-based image optimization for social media
import sharp from 'sharp';

const PLATFORM_SPECS = {
  instagram_square: { width: 1080, height: 1080, quality: 85 },
  instagram_portrait: { width: 1080, height: 1350, quality: 85 },
  facebook_post: { width: 1200, height: 630, quality: 85 },
  gbp_post: { width: 1200, height: 900, quality: 85 },
  youtube_thumb: { width: 1280, height: 720, quality: 90 },
};

async function optimizeForPlatform(inputBuffer, platform) {
  const spec = PLATFORM_SPECS[platform];
  return sharp(inputBuffer)
    .resize(spec.width, spec.height, { fit: 'cover' })
    .jpeg({ quality: spec.quality, mozjpeg: true })
    .toBuffer();
}
```

### 4D. Scheduling vs Instant Posting

**Recommendation: Scheduled with manual override**

- Default: Activities approved before 12pm publish at 5pm same day (peak parent engagement). Activities approved after 12pm publish next day at 10am

- Override: Admin can click "Publish Now" for time-sensitive content (events, celebrations)
- Optimal posting times for preschool audience:
  - Instagram: 5-7pm weekdays (parents post-work), 9-11am weekends
  - Facebook: 1-3pm weekdays, 9am-12pm weekends
  - YouTube: Anytime (evergreen content)
  - GBP: Weekly posts, any time (SEO benefit is time-independent)

### 4E. Content Approval Workflow

```
Teacher captures activity (photos + description)
    ↓
AI generates platform-specific captions
    ↓
Preview shows how post will look on each platform
    ↓
Admin/Principal reviews → Approve / Edit / Reject
    ↓
Approved → enters scheduled queue
    ↓
Publishing engine posts at optimal time
    ↓
Post status tracked (success/failure per platform)
    ↓
Weekly analytics summary sent to admin
```

---

## 5. Pricing Analysis (Single Preschool)

### 5A. API Free Tier Capabilities

| Service | Free Tier | Sufficient for 1 Preschool? |
|---|---|---|
| Meta Graph API (FB + IG) | Unlimited (API is free) | YES — publish as much as you want |
| YouTube Data API | 10,000 units/day (6 uploads/day) | YES — preschool won't upload 6 videos/day |
| Google Business Profile API | Unlimited (API is free) | YES |
| Ayrshare | 20 posts/month | MAYBE — tight if posting 5x/week on 4 platforms |
| Buffer (free) | 3 channels, 10 posts/channel/month | NO — only 30 posts total/month |
| Make.com (free) | 1,000 ops/month, 2 scenarios | MAYBE — depends on workflow complexity |
| Zapier (free) | 100 tasks/month | NO — too limited |
| n8n (self-hosted) | Unlimited | YES — if you have a server |

### 5B. Cost Scenarios

**Scenario A: Maximum Free (Developer builds everything)**

| Item | Monthly Cost |
|---|---|
| Meta Graph API | $0 |
| YouTube Data API | $0 |
| Google Business Profile API | $0 |
| Vercel Blob (media storage, <1GB) | $0 (included in Vercel free) |
| Vercel Hosting | $0 (hobby) or $20 (Pro) |
| **Total** | **$0 - $20/month** |

Trade-off: Significant development time (40-80 hours) to build direct integrations. Must handle Meta App Review. Must build scheduling, retry logic, and error handling from scratch.

**Scenario B: Middleware Approach (Fastest to build)**

| Item | Monthly Cost |
|---|---|
| Ayrshare Premium | $99/month |
| Vercel Pro | $20/month |
| Cloudinary (free tier) | $0 |
| **Total** | **$119/month** |

Trade-off: Fastest to build (10-20 hours). But $99/month is steep for a single preschool.

**Scenario C: Balanced (Recommended)**

| Item | Monthly Cost |
|---|---|
| Make.com Core (automation) | $9/month |
| Cloudinary (free tier, 25 credits) | $0 |
| Vercel Pro | $20/month |
| Upstash Redis (free tier) | $0 |
| **Total** | **$29/month** |

Trade-off: Good balance. Make.com handles the API complexity. 20-30 hours development. 10,000 operations/month is plenty.

**Scenario D: Self-Hosted Power (Best long-term value)**

| Item | Monthly Cost |
|---|---|
| Direct Meta + YouTube + GBP APIs | $0 |

| | |
|---|---|
| Postiz or n8n on VPS ($5 DigitalOcean) | $5/month |
| Cloudinary (free tier) | $0 |
| Vercel Pro | $20/month |
| **Total** | **$25/month** |

Trade-off: Requires 50-70 hours initial development + self-hosting management. But lowest recurring cost with maximum control.

### 5C. Media Storage Costs

| Service | Free Tier | Paid Pricing | Notes |
|---|---|---|---|
| **Cloudinary** | 25 credits/month (~25GB storage + 25GB bandwidth + 25,000 transformations) | Plus: $89/month | Free tier is generous for a single preschool. Image optimization built-in |
| **Vercel Blob** | Included in Vercel plans (varies) | $0.023/GB stored + $0.15/GB bandwidth | S3-backed. Simple SDK. Good for Next.js |
| **AWS S3** | 5GB storage, 20,000 GET, 2,000 PUT (12 months) | ~$0.023/GB/month | Most flexible but most complex |
| **Supabase Storage** | 1GB included on free plan | $0.021/GB on Pro ($25/month) | Integrated with Supabase auth/DB |

**Recommendation**: Cloudinary free tier for a single preschool. The built-in image transformations (auto-resize, auto-format, auto-quality) eliminate the need for sharp processing on your server. You upload once and request platform-specific sizes via URL parameters.

### 5D. Total Cost Summary

| Approach | Monthly Cost | Dev Hours | Best For |
|---|---|---|---|
| All-free (direct APIs) | $0-20 | 60-80 hrs | Technical founders with time |
| Middleware (Ayrshare) | ~$119 | 10-20 hrs | Fastest launch, budget available |
| Balanced (Make.com) | ~$29 | 20-30 hrs | **Recommended for Kidzee** |
| Self-hosted (Postiz/n8n) | ~$25 | 50-70 hrs | Long-term, multi-school scaling |

---

## 6. Final Recommendations

### For a Single Kidzee Franchise

1. **Start with Make.com + direct Meta APIs**. Build the activity capture and approval workflow in Next.js. Use Make.com to orchestrate posting to FB, IG, YouTube, and GBP. Total cost: ~$29/month
2. **Use Cloudinary free tier** for media storage and on-the-fly image optimization. No need for server-side sharp processing initially

3. **Content strategy**: Post 3-5 times per week. Mix of activity photos (carousel), short Reels (15-30 sec activity clips), and weekly recap videos. Focus on Instagram and Facebook — that's where parents are
4. **Approval workflow is non-negotiable**. Children's photos require careful handling. Every post must be reviewed by admin before publishing. Build this into the core UX
5. **AI caption generation** saves teacher time. Use Claude or GPT to generate platform-specific captions from the activity description. Teacher writes "Kids did finger painting with primary colors" and AI generates Instagram caption with hashtags, Facebook post with longer narrative, and YouTube description

### For Scaling to Multiple Kidzee Franchises

1. **Replace Make.com with self-hosted n8n or Postiz** to eliminate per-operation costs
2. **Move to direct API integrations** for Meta, YouTube, and GBP
3. **Multi-tenant architecture**: Each franchise gets their own connected social accounts but shares the platform
4. **Consider white-labeling**: This becomes a SaaS product for preschool chains. No competitor offers this today

### The Market Gap

The research confirms a clear gap: **no existing preschool management platform bridges activity documentation to social media publishing**. Every tool (Brightwheel, Lillio, ClassDojo, illumine) keeps content in its own walled garden. A Next.js app that captures teacher-created activity content, runs it through an approval workflow, and auto-publishes to social media would be genuinely novel in this space.
