12. Audit: Current App vs Design System

Color Hardcoding (BEFORE)

File	Hardcoded Values	Status
`page.tsx` (home)	15+ Tailwind color classes	Needs migration
`header.tsx`	8+ gradient/color classes	Needs migration
`footer.tsx`	6+ gradient/color classes (wrong palette!)	Needs migration + fix
`activity-card.tsx`	7 hardcoded gradient arrays + 12+ colors	Needs migration
`year-selector.tsx`	4+ color classes	Needs migration
`admin/page.tsx`	20+ color classes	Needs migration
`admin/login/page.tsx`	10+ color classes	Needs migration

Key Issues Found

1. **Footer uses wrong brand colors** — Purple-Blue-Cyan gradient instead of brand purple
2. **No Fredoka/Sniglet/Lato fonts** — App uses system Arial
3. **100+ hardcoded Tailwind color classes** — No CSS variables
4. **No tailwind.config.ts** — Can't customize theme
5. **Inconsistent gradients** — Header and hero use slightly different warm gradients
6. **No focus/disabled states** — Accessibility gap
7. **No dark mode support** — No theme toggle infrastructure

Migration Priority

1. **P0 (Critical):** Install brand fonts (Fredoka, Lato, Sniglet)
2. **P0 (Critical):** Create CSS variables + Tailwind config with token values
3. **P1 (High):** Fix footer to use brand purple gradient
4. **P1 (High):** Replace all hardcoded colors with CSS variable references
5. **P2 (Medium):** Add component variants (Button, Card, Input)
6. **P2 (Medium):** Add focus states and accessibility improvements
7. **P3 (Low):** Add dark mode support
8. **P3 (Low):** Add decorative Kidzee illustrations
